

## The **New** Worksafe Anchor

Another innovative, **SAFETY RELATED** product from the makers of  
**Worksafe Platforms**

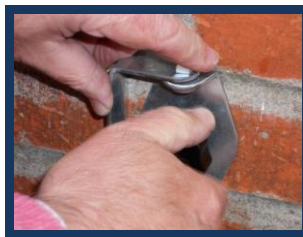

The Worksafe Anchor is a unique, easily fitted and removable anchoring system used with:

- Brick
- Concrete
- Wood/decking
- Cement
- And more

The anchor fits into a 16mm x 75mm hole and is strong, safe and secure, the perfect answer for many applications.

Simply push the Worksafe Anchor into the pre-drilled, appropriately sized hole, turning the plastic wheel clockwise firmly until securely tightened into place. The unit will then have completed a firm bond with the wall.

The unit is now ready for use. To remove, reverse the process, turn the plastic turn wheel anti-clockwise until the Worksafe Anchor can be easily pulled free.

The ideal solution for many trades requiring constantly moving fixing points for ladders and other working at height apparatus in order to comply with the **HSE** and **WORKING AT HEIGHT REGULATIONS**.
